

Hey, it's Chase!

This is the exact resume template I used when I got hired at Meta.

The template is on the next page. Swap in your own experience, projects, and skills - the structure and format are what matter most.

IMPORTANT: Do not request edit access to the template - that won't work.

To use the template, simply go to the top of the page and click **File** -> **Make a copy**, and then you'll have full edit access to the resume template. ([How To Make A Copy](#))

A few things to keep in mind before you use it:

Keep it to one page. Recruiters average 7 seconds per resume. Page two doesn't exist to them.

Lead with impact, not duties. Don't write what you did, write what you achieved. Numbers beat descriptions every time. *"Reduced load time by 40%"* beats *"Responsible for performance optimization."*

Tailor it for every role. Pull keywords directly from the job posting. ATS filters will quietly eliminate your resume if they don't match. Most candidates skip this and never know why they're not hearing back.

Don't underestimate your projects section. Especially early in your career, strong projects can unlock interviews that your work history alone won't. Use it.

One caveat: This template is built for software engineering and technical roles. If you're applying to non-technical positions, you may need to adjust the layout.

Good luck - you've got this.

Chase

EDUCATION

Stanford University Bachelor of Science in Computer Science (GPA: 3.9 / 4.0)	August 2019 - May 2023
Relevant Coursework: Operating Systems, Database Management, Computer Networks, Data Structures and Algorithms (C++), Web Development (JavaScript).	

EXPERIENCE

Meta Software Engineer Menlo Park, CA	July 2023 - Present
- Rebuilt legacy monolith into containerized microservices using Go and Kubernetes, cutting infrastructure costs by 31%. - Improved search performance by 44% by migrating from MySQL to Elasticsearch for high-frequency query workloads. - Shipped a mobile-first onboarding flow in React Native that increased user activation rates by 29%. - Automated nightly regression testing across 6 environments, reducing QA cycle time from 3 days to 4 hours.	
Atlassian Software Engineer Intern Remote	May 2022 - August 2022
- Prototyped a real-time notification service using Kafka and Redis, handling 50,000+ events per minute. - Refactored authentication middleware to support SSO, eliminating a recurring security vulnerability. - Shadowed senior engineers in weekly architecture reviews, contributing two approved proposals for API versioning. - Built an internal CLI tool in Python to automate deployment environment setup, saving the team roughly 3 hours per sprint.	

PROJECTS

Personal Finance Tracker Technologies: Next.js, Node.js, Plaid API, SQLite	- Built a full-stack budgeting app that aggregates transactions across accounts and auto-categorizes spending. - Integrated Plaid API for secure bank connections, supporting 12 major financial institutions at launch. - Deployed on Vercel with sub-200ms average load times across all routes.
Distributed Task Scheduler Technologies: Python, Redis, Docker	- Designed a fault-tolerant job queue processing 1M+ daily background tasks with automatic retry logic. - Containerized the full stack with Docker Compose, reducing local setup time for new contributors to under 5 minutes.
Sports Score Prediction Model Technologies: Scikit-learn, FastAPI, Streamlit	- Trained a gradient boosting classifier on 10 years of historical game data, achieving 71% prediction accuracy. - Wrapped the model in a FastAPI service and built an interactive Streamlit dashboard for live input and output.

TECHNICAL SKILLS

Programming Languages: Python, Go, JavaScript, TypeScript, Java, Bash
Frameworks and Tools: React Native, Next.js, Node.js, FastAPI, Kubernetes, Redis, Elasticsearch, Kafka, Docker
Concepts: Distributed Systems, Event-Driven Architecture, RESTful APIs, CI/CD, Machine Learning
